(54) Title: **DEVICE FOR ESTABLISHING COMMUNICATIONS INTEROPERABILITY AT AN INCIDENT SITE INCLUDING MEANS FOR RECORDING CRISIS INCIDENTS**

(57) Abstract: What is provided is recording capability for each of the modules utilized by the first responders and other personnel within the area of the incident, with the stored information at each of the first responders' modules being read out through the ad hoc network, where it can be uploaded to storage. The stored information can be displayed at an incident commander work station in real time to give the incident commander a realistic view of the timeline and the severity of the incident, as well as the response. The use of the ad hoc network permits offloading stored information from each of the first responders' modules so as to free up storage within the modules. By providing storage at every node of the ad hoc network, one has access to a timeline of the actions at the incident as well as redundancy, which enhances the memories and observational skills of the first responders. Incident reporting is made complete due to the fact of all recordings being made available at one node on the temporary ad hoc network from which information reports and analysis can proceed, as well as subsequent training.
